R&D and Special Products & Services

R&D (according to Deardorff's Glossary of International Economics. www-personal.umich.edu/~alandear/glossary/r.html) is defined as: "The use of resources for the deliberate discovery of new information and ways of doing things, together with the application of that information in inventing new products or processes".

Prior to and since 1990 Target Team members have been conducting commissioned and non-commissioned research to find, collect, test and analyse E&P data and information to develop technical solutions and answers for the oil industry. Some of the exclusive and non-exclusive research, anomalies, information, processes and analysis of E&P data that have been documented as maps, sections, reports, studies and publications are listed below.
