**Geology and Reservoirs of a
Sleeping Giant:**

Hamrin Field

IRAQ

A Target Exploration Report

Geology and Reservoirs of a Sleeping Giant: Hamrin Field IRAQ

The Report

A shallow oil and gas trap was discovered by IPC in 1961 at Hamrin anticline, central Iraq via well Hamrin-1. The discovery remained un-appraised until INOC deepened Hamrin-1 in 1973. INOC began an appraisal and development programme of this discovery in 1976 and produced about 2 MMSTB of 32 °API oil by 2003. **This is a study of the reservoirs and reserves of this giant field.**

Contents

1. Summary
2. Illustrations
3. Introduction
4. Reservoir Geology
5. Trapping Mechanism
6. Reservoir Conditions
7. Estimated Hydrocarbon Reserves
8. References
9. Appendices
10. Enclouures

Illustrations

1. Geological Map of the study area, showing well locations and structural elements.
2. NW-SE stratigraphic correlation diagram of Hamrin wells.
3. NW-SE structural cross-section of Hamrin Field.
4. SW-NE structural cross-section of the central (Nukhaila) dome of Hamrin Field and Ajeel (Saddam) Field.
5. SW-NE structural cross-section of the southern (Allass) dome of Hamrin Field.
6. Structural contour map of top of Lower Miocene of Hamrin Field.
7. Structural contour map of the base of Upper Cretaceous of Hamrin Field.

Appendices

1. Formation Tops recognised in the study.
2. Volumetric Hydrocarbon reserves calculation and Monte Carlo reserves analysis.

Enclosures

1. Geological Map of the study area, showing well locations and structural elements.
2. NW-SE stratigraphic correlation diagram of Hamrin wells.
3. NW-SE structural cross-section of Hamrin Field.
4. SW-NE structural cross-section of the central (Nukhailah) dome of Hamrin Field and Ajeel (Saddam) Field.
5. SW-NE structural cross-section of the southern (Allass) dome of Hamrin Field.
6. Structural contour map of the base of Tertiary reservoirs of Hamrin Field.
7. Structural contour map of the base of Cretaceous reservoirs of Hamrin Field.
